

DC POWER SYSTEMS UNVEILS THE *CARRY GRANT*[®] FINANCING PROGRAM
EXCLUSIVELY FOR DC POWER SYSTEMS' CUSTOMERS

Program Reduces Dealers' Cash Outflow for Materials By Thirty Percent

HEALDSBURG, CA, August 24, 2009 - DC Power is proud to announce the launch of the *CARRY GRANT*[®] financing program. Under the new program, DC Power, with a proper assignment, will carry the federal tax grant for a qualifying installation until the Treasury Department pays the grant. DC Power's existing or new dealer/installers may enroll in the *CARRY GRANT*[®] financing program.

The program directly reduces the cash outlay required for qualifying installations by thirty percent. The *CARRY GRANT*[®] financing program requires dealers have an active account and purchase project materials from DC Power.

"In this economy, reducing the required cash outlay by thirty percent can be the deciding factor that enables a dealer to win a project," says Daniel Marino, Executive Vice President of DC Power. Mathew Amandoli, National Sales Manager, adds "This program could jumpstart the market for commercial installations."

DC Power Systems, North America's leading distributor of renewable energy solutions, will also carry the value of local rebates. The *CARRY GRANT*[®] can work in parallel with this program or separately. If used in parallel, DC Power could carry up to sixty percent of the installation cost in some markets.

Unlike other financing programs, DC Power's *CARRY GRANT*[®] is an interest-free benefit. "It is so amazingly simple and available to everyone," continues Daniel Marino. Interested dealers should call their DC Power Systems salesperson for additional information. Installers not currently doing business with DC Power should call Mathew Amandoli (707-395-3129) or fill out a Dealer Application available at <http://www.dcpower-systems.com/documents/DCPowerSystems-DealerandCreditApplication.pdf>
